

EVANGELISMOS HOSPITAL

Project information

LOCATION: ATHENS

ARCHITECTURAL DESIGN: KYRIAKIDES AND ASSOCIATES ARCHITECTS SA,
ELYTRON A + U

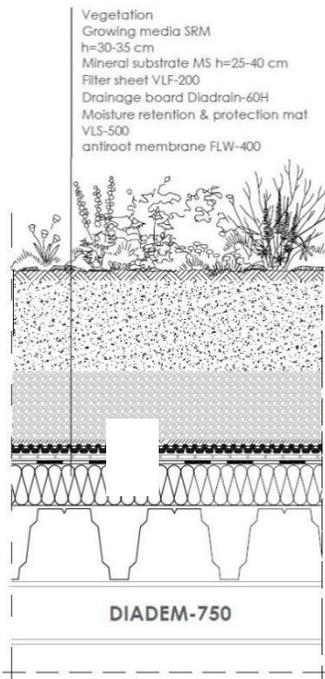

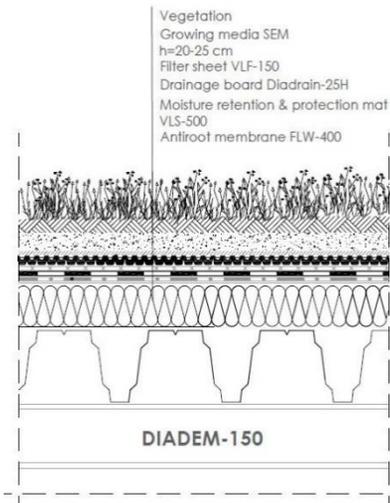

CONSTRUCTION: AKTOR SA

YEAR OF IMPLEMENTATION : 2016

Description

The design of the new surgical ward of the Evangelismos Hospital was undertaken by G. Kyriakidis & Associates SA, which included partial coverage of the floors with planting, in accordance with the principles of bioclimatic architecture. AKTOR SA undertook the construction of the new wing with a total surface of 11.470.33 m². Integrated planting systems were applied on inclined (600 m²) and horizontal surfaces (650 m²). Diadem materials were used for the infrastructure of the planted rooms. Extensive type (DIADEM-150) was implemented on the sloping roofs with low planting of aromatic and medicinal plants, while the intensive type (DIADEM-750) was implemented on the horizontal roofs and trees (Pomegranate, Olive) were planted in combination with aromatic-medicinal plants.

Green Up the Roof!
